### Interest over time ?

News headlines  Forecast ?

The development is active

- bzip → git

- ChangeLog elimination

- C99 requirement

- useful new libraries

- pattern matching
- generalized variables
- generic indentation engine

New features

# Lisp enhancements

- CLOS generic functions
- generators
- finalizers
- seq / map

Package manager  
- asynchronous downloads

Cairo rendering  
- instead of X11 primitives

# Security

- certificate checking UI
- GnuPG pinentry integration

## Unicode support

- utilisation of '...'
- character-folded search: a, (a), ©
- input shortcuts

GNOME inspired features

- subprocess
- dbus-codegen

**GNOME™**

Humble Idea:

Could any of the Emacs concepts  
be useful for GNOME?

Thanks!
